Sense Sensors

A unique service which measures the utilisation of desks and conference rooms

Workspace occupancy sensing helps you understand how your desks, rooms and break-out spaces are used. Sense sensors provides you with information to make informed decisions around your real estate and to utilise that space effectively, whether that be more meeting rooms, huddle rooms or hotdesks. therefore making the most efficient use of all of your office space.

To collect the data, wireless sensors are deployed that continually and accurately measure your workspace utilisation. It helps you identify the right type and right quantity of workspace for your company allowing you to reduce your energy bill, 'right-size' your real estate and develop ongoing cost-saving initiatives.

The Sense sensor is a small, discrete, easy to affix, wireless device that uses a dedicated, stand-alone network to gather utilisation data via a series of passive infrared signals.

The sensors transmit utilisation data back to a centralised database in the Cloud, which is then presented back to you in easy to understand graphs and tables.

Intelligent data analysis and real time data capture

Each device takes 1,300 readings per day creating reports that show actual utilisation. This can vastly improve building access control data or information held within CAFM systems. The data also changes daily, building up an aggregated view of how every space is used. This gives Facilities Managers the ability to quickly adapt their property strategies based on internal or external pressures.

Low energy consumption

Sense has a very low energy consumption with a just a single battery that lasts over 2 years. This solution delivers unparalleled ROI. The cost efficient sensor provides the value and flexibility to use on a temporary or permanent basis.

Identify different working styles down to an individual desk level

With the Sense data, you can identify different styles of working and position these into groups (e.g. mobile, flexi or fixed) based on your desk space requirements. This enables you to 'right size' your real estate and remove or reallocate underutilised space; creating a more efficient working environment.

Cloud-based reporting portal with instant access

Sense has a cloud-based reporting portal that gives clients up to date access to their company's utilisation data through any Internet enabled device. Once you have utilisation data collected from Sense, you can use meeting room and/or desk booking software to help reduce your real estate costs, manage meeting room/desk bookings and control no-shows.

About Vega Europe

At Vega Europe, part of the Vega Global Group, we focus on making your communications easy by ensuring all your audio visual and collaboration solutions are integrated within a seamless strategy, providing global business with a local service.

Vega Europe have rapidly grown over the past 6 years, winning tenders and projects in many sectors which include high profile banks, leading pharmaceutical companies, law practices, retail outlets, and technology businesses throughout Europe and the UK.
